                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     seq length: 0

SUBCELLULAR LOCATION: Cytoplasmic.
TISSUS SPECIFICITY: Testis. Primary spermatocytes and early
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       spermatids.

DOMAIN: The predominant structure is alpha-helical.

POLYMORPHISM: Length polymorphisms exist between different strains, most likely caused by length variations within the tandem
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   S51364; S51364.

Natl. Acad. Sci. U.S.A. 100:7877-7882(2003).

-- FUNCTION: Histone-like DNA-binding protein which is capable of wrapping DNA to stabilize it, and thus to prevent its denaturation under extreme environmental conditions (By similarity).

-- I- SIMILARITY: Belongs to the bacterial histone-like protein family.
                                                                                                                                                                                               InterPro; IPRO00119; Bac DNAbind.

wrapping DNA to stabilize it, and thus to prevent its denaturation
under extreme environmental conditions (By similarity).
-!- SIMILARITY: Belongs to the bacterial histone-like protein family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Submitted (DEC-1997) to Swiss-Prot.

FUNCTION: Possible structural role in the sperm tail. associated with axonemal structures. SUBCELLULAR LOCATION: Cytoplasmic (By similarity). TISSUE SPECIFICITY: Testis. Located in spermatocytes spermatid bundles.

DOMAIN: The predominant structure is alpha-helical.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MISCELLANEOUS: SERUM FROM PATIENTS DIAGNOSED WITH ACTIVE TUBERCULOSIS THAT HAD NOT BEEN VACCINATED CONTAINS ANTIBODIES T RECOGNIZE HEHA, WHEREAS SERUM FROM HEALTHY INDIVIDUALS DOES NOT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DOMAIN: HEPARIN BINDING SEEMS TO REQUIRE THE C-TERMINAL END DOMAIN OF HEHA. PROGRESSIVE TRUNCATIONS FROM THE C-TERMINAL END DIMINISH THE AFFINITY FOR HEPARIN.

PTM: GLYCOSYLATED. GLYCOSYLATION MAY PROTECT THE PROTEIN FROM PROTEOLYTIC DEGRADATION AND BE IMPORTANT FOR HEMAGGLUTINATION. I SUGGEST'S THAT THE CARROHYDRATE MOIETY MAY BE LOCATED WITHIN THE TERMINAL DOMAIN OF HEHA.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune diseases.

Claim 10; Page 14; 72pp; English.

AAY82571 to AAY82577 represent specifically claimed copolymer molecular weight TV-marker polypeptides from the present invention. The present invention describes polypeptides (I) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight and an amino acid composition corresponding to the copolymer. The polypeptides

                                                       Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            arthritis, osteoarthritis, autoimmune haemolytic anaemia, autoimmune cophoritis, autoimmune thyroiditis, autoimmune uveoretinitis, Corbin's disease, chronic immune thyroiditis, autoimmune uveoretinitis, Corbin's ensitivity disease, diabetes mellitus, Graves disease, Guillain-Barre's syndrome, Hashimoto's disease, idiopathic myxoedema, myasthenia gravis, psoriasis, pemphigus vulgaris, or systemic lupus erythematosus. Mediated-mediated diseases which can be treated include host-versus-graft disease, graft-versus-host disease, and delayed-type hypersensitivity. The polypeptides of the invention have defined molecular weights and physical properties which are analogous to glatiramer acetate molecules, which makes them ideal for use as molecular weight markers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     of the invention are used as molecular weight markers for glatiramer acetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune diseases which may be treated include either cell-mediated or antibody-mediated diseases. Such diseases include arthritic conditions, demyelinating diseases and inflammatory conditions, e.g. multiple sclerosis, rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WO200018794-A1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Unidentified
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Copolymer molecular weight TV-marker amino acid sequence SEQ ID NO:7.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    28-JUL-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAY82577 standard; peptide; 109

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cd weight TV-marker polypeptides from the present invention. The present convention describes polypeptides (I) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight and an composition corresponding to the copolymer. The polypeptides cof the invention are used as molecular weight markers for glatiramer caretate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune diseases compositions are used at arthritic conditions, demyelinating conditions, and the compositions of the compositions of the compositions of the conditions of the compositions of the conditions of the composition of the conditions of the condition of the conditions of the cond
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC weight TV-marker polypeptides from the present invention. The present coinvention describes polypeptides [1] for determining the molecular weight of a copolymer (CP), which has an identified molecular weight and an coin acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for glatifamer actate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune diseases which may be treated include either cell-mediated or antibody-mediated coiseases. Such diseases include arthritic conditions, demyelinating comploritis, osteoarthritis, autoimmune haemolytic anaemia, autoimmune activity disease, chronic immune thyroiditis, autoimmune uveoretinitis, contact cophoritis, autoimmune thrombocytopaenia purpura, colitis, contact comploritis, autoimmune thrombocytopaenia purpura, colitis, contact consistivity disease, disease, dispathic myxoedema, myasthenia gravis, compositivity disease, disease, dispathic myxoedema, myasthenia gravis, composities, pemphigus vulgaris, or systemic lupus erythematosus. Mediated-composities which can be treated include host-versus-graft disease, collypeptides of the invention have defined molecular weights and physical properties which are analogous to glatiramer acetate molecules, which can be contact makes them ideal for use as molecular weight markers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       acetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune diseases which may be treated include either cell-mediated or antibody-mediated diseases. Such diseases include arthritic conditions, demyelinating diseases and inflammatory conditions, e.g. multiple sclerosis, rheumatoid arthritis, osteoarthritis, autoimmune haemolytic anaemia, autoimmune coophoritis, autoimmune thyroiditis, autoimmune uveoretinitis, Crohn's disease, chronic immune thrombocytopaenia purpura, colitis, contact sensitivity disease, diabetes mellitus, Craves disease, Guillain-Barre's syndrome, Hashimoto's disease, idiopathic myxoedema, myasthenia gravis, psoriasis, pemphigus vulgaris, or systemic lupus erythematosus. Mediated mediated disease, which can be treated include host-versus-graft disease, graft-versus-host disease, and delayed-type hypersensitivity. The copperties which are analogous to glatiramer acetate molecules, which makes them ideal for use as molecular weights and physical properties which are analogous to glatiramer acetate molecules, which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAY82571 to AAY82577 represent specifically claimed copolymer molecular weight TV-marker polypeptides from the present invention. The present invention describes polypeptides (I) for determining the respective of a copolymer (CP), which has an identified molecular weight and an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for glatiramer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 77 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune diseases
                                                                                                                                 Unidentified.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 disease, chronic immune thrombocytopaenia purpura, colitis, contact sensitivity disease, diabetes mellitus, Graves disease, Guillain-Barre's syndrome, Hashimoto's disease, idiopathic myxoedema, myasthenia gravis, psoriasis, pemphigus vulgaris, or systemic lupus erythematosus. Mediated-mediated diseases which can be treated include host-versus-graft disease, graft-versus-host disease, and delayed-type hypersensitivity. The polypeptides of the invention have defined molecular weights and physical properties which are analogous to glatiramer accetate molecules, which makes them ideal for use as molecular weight markers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAY82571 to AAY82577 represent specifically claimed copolymer molecular weight TV-marker polypeptides from the present invention. The present invention describes polypeptides (I) for determining the molecular weigh of a copolymer (CP), which has an identified molecular weight and an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for glatiramer
  pemphigus vulgaris; systemic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 86 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     acetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoinmune diseases which may be treated include either cell-mediated or antibody-mediated diseases. Such diseases include arthritic conditions, demyelinating diseases and inflammatory conditions, e.g. multiple sclerosis, rheumatoid arthritis, osteoarthritis, autoimmune haemolytic anaemia, autoimmune cophoritis, autoimmune thyroiditis, autoimmune uveoretinitis, Crohn's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 10; Page 14; 72pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            diseases and inflammatory conditions, e.g. multiple sclerosis, rheumatoid arthritis, osteoarthritis, autoimmune haemolytic anaemia, autoimmune ophoritis, contemune thyroiditis, autoimmune uveoretinitis, Crontact sensitivity, autoimmune thrombocytopaenia purpura, colitis, contact sensitivity disease, diabetes mellitus, Graves disease, Guillain-Barre's syndrome, Hashimoto's disease, idiopathic myxoedema, myasthenia gravis, psoriasis, pemphigus vulgaris, or systemic lupus erythematosus Mediated-mediated diseases which can be treated include host-versus-graft disease, golypeptidee of the invention have defined molecular weights and physical properties which are analogous to glatiramer acetate molecules, which makes them ideal for use as molecular weight markers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 weight TV-marker polypeptides from the present invention. The present invention describes polypeptides (I) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight and an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for glatizamer acetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune diseases which may be treated include either cell-mediated or antibody-mediated diseases. Such diseases include arthritic conditions, demyelinating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 66 AA;

                                                                                                                                                         The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression CC of the nucleic acid inhibits proliferation of a cell. Also included are: CC (1) a vector comprising a promoter operably linked to the nucleic acid (2) a host cell containing the vector; (3) an isolated cc encoding a polypeptide whose expression is inhibited by the antisense CC nucleic acid; (2) a host cell containing the vector; (3) an isolated cc polypeptide; (5) producing the polypeptide; (6) inhibited by the cc integration or the activity of a gene in an operor required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway CC required for proliferation, or that inhibits cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an CC compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits proliferation of collection of strains; or (13) identifying the target of a compound that inhibits the gene CC proliferation of an organism. The antisense nucleic acids are useful for clentifying proteins or screening for homologous nucleic acids required cfung discovery programs, or for screening homologous nucleic acids required cfung discovery programs, or for screening homologous nucleic acids of the target prokaryotic essential genes. Note: The squence is encoded by one of the target to the proliferation in cells other than S. aureus, S. typhimurium, contained the printed specification, but was obtained contained contained the printed specification, but was obtained contained the proper strained the printed specification, but was obtained

                                                                                                                                                                             disease, chronic immune thrombocytopaenia purpura, colitis, contact sensitivity disease, diabetes mellitus, Graves disease, Guillain-Barre's syndrome, Hashimoto's disease, idiopathic myxoedema, myasthenia gravis, psoriasis, pemphigus vulgaris, or systemic lupus erythematosus. Mediated-mediated diseases which can be treated include host-versus-graft disease, graft-versus-host disease, and delayed-type hypersensitivity. The polypeptides of the invention have defined molecular weights and physical properties which are analogous to glatiramer acetate molecules, which makes them ideal for use as molecular weight markers
                                                                                                                                                                                                                                                                                                                                                                                      AAY82571 to AAY82577 represent specifically claimed copolymer molecular weight TV-marker polypeptides from the present invention. The present invention describes polypeptides from the present invention are copolymer (CP), which has an identified molecular weight and an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for glatiramer acetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune diseases which may be treated include either cell-mediated or antibody-mediated diseases. Such diseases include arthritic conditions, demyelinating diseases and inflammatory conditions, e.g. multiple sclerosis, rheumatoid arthritis, osteoarthritis, autoimmune haemolytic anaemia, autoimmune cophoritis, autoimmune thyroiditis, autoimmune uvecretinitis. Crohn's because disease include arthritic anaemia, autoimmune diseases and inflammatory conditions, autoimmune uvecretinitis. Crohn's
                                                                                                                                           Sequence 35 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Crohn's disease; chronic immune thrombocytopaenia purpura; colitis; diabetes mellitus; Graves disease; Guillain-Barre's syndrome; psoriasis; Hashimoto's disease; idiopathic myxoedema; myasthenia gravis; pemphigus vulgaris; systemic lupus erythematosus.

A menchionine residue 5' linker sequence, in order that the COP-1 sequences, originating from the from the fusion protein. rCOP-1-19 contains oligonucleotide duplexes incoding the following segments: YKK, AAE, KAK, KKA, YEA, AKA KEA, and AAA. The N-terminal alanine residue is left behind following CNBr cleavage of the fusion protein. The product prevents or arrests experimental autoimmune encephalomyelitis. They are used to prevent, arrest or control a demyelinating disorder, e.g. multiple sclerosis. They may also be used as additives to hair care products to confer beneficial effects on damaged hair or as supplements for diets deficient in certain amino acids. See also AAQ05664.                                                                                                                                                                                                                                                                                                                                                                                                                                                       To improve the expression of rCOP-1 polypeptides in E. coli, genes coding for rCOP-1-19 were subcloned from pREV 2.1 to pBG3-2deltaN (deposit: 20-NOV-1984 US4691009, NRRL B-15910), a plasmid used to express Protein A. The resulting plasmids encode fusion proteins consisting of beta-plasmids encode fusion proteins. A methionine residue glucuronidase, Protein A, and rCOP-1 sequences. A methionine residue

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT 11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This compound represents a glycopeptide effective in inhibiting the binding of labelled mannosylated BSA to mannose receptors. Mannose receptors are uniquely found on macrophages and not on monocytes. Glycopeptides such as this provide a mechanism to target macrophages specifically, to image, label, destroy or otherwise alter their antigen grocessing function. In addition they can be conjugated to solid supports and used to purify mannose receptors from a variety of sources. They are useful in the treatment of inflammatory diseases driven by macrophage secretory products eg. Crohn's disease; infectious diseases in which macrophages harbour replicating infectious agents eg. Legionnaires disease, viral infections involving monnuclear phagocytes eg. HIV and lysosomal storage diseases; anthma mediated by alveolar macrophages; and in controlling metastasis, mediated by systemic macrophages. The peptides can also be used to deliver antigenic peptides as conjugates to a marchal an immune response; also self peptides to prevent tissue transplant rejection. the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational and the carried of the c
Sequence 421 AA;
                                                                                                                           drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                     ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               N-PSDB; ACA32429
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated nucleic acid comprising any one of

                                                                                                                                                                                                                                                                                                                                           ફ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC encoding a polypoptide whose expression is inhibited by the antisense conucleic acid; (2) a host cell containing the vector; (3) an isolated conucleic acid; (2) a host cell containing the vector; (3) an isolated copolypoptide or its fragment whose expression is inhibited by the cantisense nucleic acid; (4) an antibody capable of specifically binding the polypoptide; (5) producing the polypoptide; (6) inhibiting cellular conclideration; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway capable of specifically binding cellular proliferation; (7) identifying a compound that influences the activity of identifying a gene required for cellular proliferation or the biological pathway capathway in which a proliferation, or that inhibits cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound is activity; (11) a culture comprising strains in which the gene compound search of the strains is present in a culture or collection of the proliferation of an organism. The antisense nucleic acids required for cellular proliferation to isolate candidate molecules for rational contributed for proliferation in cells other than S. aureus S. typhimurium, capatived for proliferation in cells other than S. aureus S. typhimurium, capatived for part of the printed specification, but was obtained contribution. Format directly from WIPO at the sequence data for this capathypolitic sessential penes. Note: The sequence data for this capathypolitic sessential penes.                                                                                                                                                                                                                                                                                                 S
                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to the genome sequence of Listeria CC monocytogenes EGD-e (see ABA03041). The genome sequence and fragments of it are useful for selecting probes and primers for detecting genes in L. comonocytogenes and related organisms, and for studying genetic polymorphisms and other genomes. The present sequence is a protein ce encoded by the genome sequence of the present invention. Proteins combined the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, and cfor biosynthesis and biodegradation, especially biosynthesis of Vitamin combined that regulate gene expression and cell replication and electing compounds that regulate gene expression and cell replication cand modulate L. monocytogenes related diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and concovitogenes and related organisms. Note: The sequence data for this patent did not form part of the printed specification, but was obtained or form victoriat directly from MIPO at

Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid comprising a promoter operably linked to the nucleic acid composition where expression is inhibited by the antisense mucleic acid; (2) a host cell containing the vector; (3) an isolated complete containing the vector; (3) an isolated composition of the fragment whose expression is inhibited by the antisense composition of the containing the vector; (3) an isolated composition of the containing the polypeptide; (6) inhibited by the activity of a gene in an operon required for proliferation, or that influences the activity of groundifferation or the activity against a biological pathway of the gene product or that has an activity against a biological pathway or in which a proliferation or that inhibits cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound that inhibits proliferation of an organism acts is present in a culture or collection of the strains is present in a culture or collection of compound that inhibits proliferation of an organism. The antisense nucleic acids are useful for cidentifying proteins or screening for homologous nucleic acids required cory programs, or for screening homologous nucleic acids required cory programs, or for screening homologous nucleic acids required cory programs, or for screening homologous nucleic acids required cory programs, or for screening homologous nucleic acids or the target prokaryotic essential genes. Note: The sequence data for this cory programs differently from WIPO at

                                                                                                                                                                   To improve the expression of rCOP-1 polypeptides in E. coli, genes coding CC for rCOP-1-77 were subcloned from pREV 2.1 to pBG3-deltaN (deposit: 20-CC NOV-1984 US4691009, NREL B-15910); a plasmid used to express Protein A. CC The resulting plasmids encode fusion proteins consisting of beta cocurs between the Protein A, and rCOP-1 sequences. A methionine residue CC occurs between the Protein A and rCOP-1 sequences, originating from the CC incher sequence, in order that the COP-1 polypeptide may be cleaved from the fusion protein. rCOP-1-77 contains ollypeptide may be cleaved CC incoding the following segments: YKK, EAE, KAK, AAK, and AAA. The N-CC terminal alanine residue is left behind following CNBT cleavage of the CC encephalomyelitis. They are used to prevent, arrest or control a CC demyelihating disorder, e.g. multiple sclerosis. They may also be used as additives to hair care products to confer beneficial effects on damaged CC also ADDREGE (Inchert of context deficient in certain amino acids. See also ADDREGE (Inchert of context deficient in certain amino acids. See
